

## **TOPIC : FARMER FORUM**

### **ABSTRACT**

Farmer Forum is a project that can be implemented for getting better results in the area of agriculture. It is a medium by which farmers can place orders for high quality seeds, fertilizers and manures can get them through the mediation of the portal. It also includes a forum where different farmers can place their views on different fertilizers. Another different feature is that the administrator frequently keeps on updating different farming methods and techniques that can be implemented and also give information's about different dos and don't's. The administrator obtains these data from different organizations, research and development teams. It is the duty of administrator to process different registrations and collect different information regarding farming techniques from different organizations and provide suggestions. The system provides the information's about farming tools, resources to the public. So, the members can give requests for tools/resources. Through this method, improved farming is possible through optimum use of internet. There exist many cooperative societies presently but almost all are inefficient and complete utilization is not made. With the use of internet facilities it is possible to make farmers from any corner aware of the new facilities and technologies and can achieve better results.

### **MODULES**

- ADMIN
- CUSTOMER(FARMER)
- RESOURCE PROVIDER
- RESEARCHER

### **ADMIN FEATURES**

Admin manages all the system.

- Authentication

- Add seed
- Add fertilizer
- Add scheme
- Approve application

### **CUSTOMER FEATURES**

- Registration
- Seed booking
- Apply scheme
- Feedback
- Tool booking

### **RESEARCHER FEATURES**

- Registration
- Add farm method
- View feedback

### **RESOURCE PROVIDER**

- Add tools
- View booking details
- View feedback
